MAGMA Grey 20"x 20"

Inspired by volcanic ash, the **MAGMA Collection** represents molten rock material that originates under the Earth's crust and the rock when it has cooled. The grey matter left behind is the color the designer was looking to exhibit when creating this porcelain tile. Great for **interior** and **exterior applications**. Can be used for **floors, walls, counter-tops** and **many other surfaces**. Impervious porcelain is resistant to stains, scratches, chemicals, extreme temperatures and UV exposure.
